A BETTER WAY TO USE INSULIN

How does it work?

The d-Nav program uses patented technology to identify your sugar patterns and then uses that information to automatically determine your next insulin dose, just like your doctor would if you could see him or her every week.

- Quickly and easily do this at home.**
 We designed d-Nav to be easy to learn and use, with help available at every step. Simply follow the step-by-step instructions to get your customized, recommended dose of insulin.
- It is safe, proven and effective.**
 To date, the d-Nav program has safely prescribed over 3.5 million insulin doses to more than 2,000 people with type 2 diabetes. Our studies have shown that 90% of patients who use d-Nav achieve lower A1c within three months.

- You're not alone!**
 d-Nav care specialists will help you get started and answer all your questions by phone or in person at our clinic. We'll also communicate regularly with your referring doctor.

“I feel this has saved my life! It's easy to use, I'm checking sugars daily, I like knowing how much insulin to take. You've allowed me to take control of my diabetes!”
